Description

[Nest](#) framework TypeScript starter repository.

Project setup

```
$ npm install
```

Compile and run the project

```
# development
$ npm run start

# watch mode
$ npm run start:dev

# production mode
$ npm run start:prod
```

Run tests

```
# unit tests
$ npm run test

# e2e tests
$ npm run test:e2e

# test coverage
$ npm run test:cov
```

Deployment

When you're ready to deploy your NestJS application to production, there are some key steps you can take to ensure it runs as efficiently as possible. Check out the [deployment documentation](#) for more information.

If you are looking for a cloud-based platform to deploy your NestJS application, check out [Mau](#), our official platform for deploying NestJS applications on AWS. Mau makes deployment straightforward and fast, requiring just a few simple steps:

```
$ npm install -g @nestjs/mau
$ mau deploy
```

With Mau, you can deploy your application in just a few clicks, allowing you to focus on building features rather than managing infrastructure.

Resources

Check out a few resources that may come in handy when working with NestJS:

- Visit the [NestJS Documentation](#) to learn more about the framework.
- For questions and support, please visit our [Discord channel](#).
- To dive deeper and get more hands-on experience, check out our official video [courses](#).
- Deploy your application to AWS with the help of [NestJS Mau](#) in just a few clicks.
- Visualize your application graph and interact with the NestJS application in real-time using [NestJS Devtools](#).
- Need help with your project (part-time to full-time)? Check out our official [enterprise support](#).
- To stay in the loop and get updates, follow us on [X](#) and [LinkedIn](#).
- Looking for a job, or have a job to offer? Check out our official [Jobs board](#).

Support

Nest is an MIT-licensed open source project. It can grow thanks to the sponsors and support by the amazing backers. If you'd like to join them, please [read more here](#).
